## Feedback on the Consultation regulation impact statement

The Medical Board of Australia is consulting on three options to ensure late career doctors are able to keep providing safe care to their patients.

The details of the options for consideration are contained in the <u>consultation regulation impact</u> <u>statement</u>.

Should all registered late career doctors (except those with non-practising registration) be required to have either a health check or fitness to practice assessment?  If not, on what evidence do you base your views?
I think it is reasonable but it should be based on the speciality,eg general surgeon versus general physician , hospital versus private practice.
2. If a health check or fitness to practise assessment is introduced for late career doctors, should the check commence at 70 years of age or another age?
70 is a good starting point

- 3. Which of the following options do you agree will provide the best model? Which part of each model do you agree/not agree with and on what evidence do you base your views?
  - Option 1 Rely on existing guidance, including Good medical practice: a code of conduct for doctors in Australia (Status quo).
  - Option 2 Require a detailed health assessment of the 'fitness to practise' of doctors aged 70 years and older every three years for doctors from the age of 70 and annually for doctors from the age of 80.

These health assessments are undertaken by a specialist occupational and environmental physician and include an independent clinical assessment of the current and future capacity of the doctor to practise in their particular area of medicine.

Option 3 Require general health checks for late career doctors aged 70 years and older every three years for doctors from the age of 70 and annually for doctors from the age of 80.

The health check would be conducted by the late career doctor's regular GP, or other registered doctor when this is more appropriate, with some elements of the check able to be conducted by other health practitioners with relevant skills, e.g., hearing, vision, height, weight, blood pressure, etc.

Option 3 is one that doesn't appear to be onerous, I don't know if there is evidence one model is better than others though.

4. Should all registered late career doctors (except those with non-practising registration) have a cognitive function screening that establishes a baseline for ongoing cognitive assessment?

If not, why not? On what evidence do you base your views?

If they are working in hospital or private practice if there is a Head of Dept. or Medical Director ,an annual review of their competency by these members may suffice, these persons will have a good idea if the > 70y aged doctors are performing to standard.

5. Should health checks/fitness to practice assessments be confidential between the late career doctor and their assessing/treating doctor/s and not shared with the Board? Note: A late career doctor would need to declare in their annual registration renewal that they have completed the appropriate health check/fitness to practice assessment and, as they do now, declare whether they have an impairment that may detrimentally affect their ability to practise medicine safely.	t
Yes	
6. Do you think the Board should have a more active role in the health checks/fitness to practice assessments?  If yes, what should that role be?	
No , this will be termed more interference than necessary and if anything off putting for late career doctors	

## Feedback on draft Registration standard: Health checks for late career doctors

career doctors helpful, clear, relevant, and workable?

This section asks for feedback on the Board's proposed registration standard: Health checks for late career doctors.

The Board has developed a draft Registration standard: health checks for late career doctors that would support option three. The draft registration standard is on page 68 of the CRIS.

7.1. Is the content and structure of the draft Registration standard: health checks for late

It explores the subject without being too vague
7.2. Is there anything missing that needs to be added to the draft registration standard?
Doctors could be offered a refresher course in their area of specialty
7.3. Do you have any other comments on the draft registration standard?
Yes, older doctor's experience and wisdom need to be recognized, they have much to offer, the invoking of such health assessments should not lead to a situation where these doctors feel oppressed and results in them leaving the work force, it is worth noting there is still a shortage of doctors, in the country – in the end there has to be a sensible balance.

## **Draft supporting documents and resources**

This section asks for feedback on the draft documents and resources developed to support Option three - the health check model.

8.	3. The Board has developed draft supporting documents and resources (page 72 or the CRIS). materials are:				
	C-1	Pre-consultation questionnaire that late career doctors would complete before their health check			
	C-2	Health check examination guide – to be used by the examining/assessing/treating doctors during the health check			
	C-3	Guidance for screening of cognitive function in late career doctors			
	C-4	Health check confirmation certificate			
	C-5	Flowchart identifying the stages of the health check.			
	The	materials are on page 72 of the CRIS.			
8.1		the proposed supporting documents and resources (Appendix C-1 to C-5) clear relevant?			
8.2. What changes would improve them?					
8.3	3. Is t	he information required in the medical history (C-1) appropriate?			

8.4. Are the proposed examinations and tools listed in the examination guide (C-2) appropriate?	
8.5. Are there other resources needed to support the health checks?
